

Please allow K-love to stay on the air. In Oklahoma, many areas have difficulty reaching smaller communities. K-love can still reach many of the communities currently. As a physician, I have found that many of my patients listen to their radio stations on FM translators. I know this because I implant defibrillators and we often discuss how these radios are safe with their devices. K-love is one of the few stations that are able to be heard across the country and around the world. My brother was able to tune in while in Afganistan and this was very important to both of us.

Thank you very much for considering our request to maintain K-love's priority.
